Category Name Design-MSS **Actionee** HAIS
Sub Category DAAC 24 X 7
Subject DAAC System Management

Description of Problem or Suggestion:

The MSS system design does not appear to take into account the decision which has been made not to staff all DAACs 24X7. Therefore, proactive management has not been maintained.

Originator's Recommendation

GSFC Response by:	GSFC Response Date
-------------------	--------------------

HAIS Response by: Forman	HAIS Schedule 2/10/95
---------------------------------	------------------------------

HAIS R. E. Forman	HAIS Response Date 2/28/95
--------------------------	-----------------------------------

The MSS design is policy independent. The selected management framework (HP Openview) will support remote monitoring, dual polling and forwarding of events to other management stations. This configuration can be based upon DAAC to DAAC and/or DAAC to SMC policy. Additionally, HP's Tornado version of Openview is expected to be a distributed management architecture supporting manager to manager communications.
